

Medication Adherence Report (90 Days)

Patient Name: Not Listed

Date of Birth: 1980-01-30

Report Interval: 2025-09-01 - 2025-11-29

SteadyStat is a self-reporting tool intended for informational purposes only. This service is provided on an "as is" and "as available" basis. All data is stored locally on your device; SteadyStat does not collect, store, or share your personal health information, or transmit user data via the cloud.

Data visualizations are based on American Heart Association (AHA) guidelines, but we do not warrant or guarantee that these represent the most current or updated medical standards. While we strive for precision, SteadyStat does not guarantee that calculations, data visualizations, or content are free from errors, omissions, or inaccuracies. Use of this tool and reliance on any information provided is solely at your own risk.

These visualizations are not a substitute for professional medical diagnosis or treatment. SteadyStat does not provide medical advice.

IF YOU THINK YOU MAY HAVE A MEDICAL EMERGENCY, CALL YOUR DOCTOR OR LOCAL EMERGENCY SERVICES IMMEDIATELY.

CONFIDENTIALITY NOTICE: This document contains privileged and confidential personal health information. The user is solely responsible for the security of this document once exported. If you are not the intended recipient, any review, dissemination, or copying of this report is strictly prohibited.

Terms of Use & Clinical Methodology

1. Nature of Tool

SteadyStat is a proprietary data visualization and self-reporting software platform. It is designed to assist users in organizing and presenting blood pressure and pulse data to their healthcare providers. SteadyStat is not a medical device, does not provide medical diagnoses, and does not offer treatment recommendations.

2. Clinical Methodology

To provide actionable insights for clinical review, SteadyStat categorizes data into specific physiological windows based on standard pharmacological principles:

- **Peak Analysis (2-6 hours post-dose):** Intended to capture the maximal drug concentration and therapeutic effect (C_{max}).
- **Trough Analysis (20-24 hours post-dose):** Intended to capture the residual therapeutic effect at the end of the dosing interval, consistent with FDA Trough-to-Peak (T/P) ratio guidelines for antihypertensive efficacy.
- **AHA Alignment:** Color-coding and categorization of blood pressure readings are based on the American Heart Association (AHA) and American College of Cardiology (ACC) guidelines.

Note: These windows are approximations. Individual metabolism and specific drug half-lives vary by patient and should be interpreted only by a licensed medical professional.

3. Privacy & Data Security

SteadyStat is designed with a Privacy-First architecture:

- **Local Storage:** All health data and personal identifiers are stored locally on the user's physical device.
- **No Cloud Transmission:** SteadyStat does not collect, store, share, or sell personal health information (PHI).
- **User Control:** The user is the sole custodian of their data. SteadyStat does not transmit data to third parties, insurers, or cloud servers.

4. Limitation of Liability & Warranty

SteadyStat and its developers provide this tool "as-is" and make no warranties, express or implied, regarding the accuracy, completeness, or currentness of the medical standards used within the app.

- **No Medical Liability:** SteadyStat assumes no liability for any adverse medical events, misinterpretations of data, or clinical decisions (including medication adjustments) made by the user or their healthcare provider.
- **Physician Responsibility:** The final interpretation of all data and all subsequent clinical actions are the sole responsibility of the treating physician.

5. Emergency Notice

DO NOT USE STEADYSTAT IN THE EVENT OF A MEDICAL EMERGENCY. If you are experiencing symptoms of a heart attack, stroke, or hypertensive crisis (e.g., chest pain, severe headache, shortness of breath, or confusion), call your local emergency services (e.g., 911) or go to the nearest emergency room immediately.

Medication Adherence Report (90 Days)

Patient Name: Not Listed	Report Interval: 2025-09-01 - 2025-11-29
Date of Birth: 1980-01-30	

BP Medication Adherence Overview

Reporting Integrity 100.0%	Therapeutic Adherence 77.4%	Adherence Alerts 4
--------------------------------------	---------------------------------------	------------------------------

Deterministic calculation rules are defined in Appendix A.

Attention Needed: (incl. all medications)
 Adherence rates for specific medications: Amlodipine: 51.1%, Hydrochlorothiazide: 92.2%, Losartan: 88.9%

Top Associated Symptoms: None Recorded
 Symptom Flag Events: 0 dose logs marked with symptom context tags.

Vitals on Adherent vs. Non-Adherent Days

Adherent Days (39d) 135/83 mmHg	Non-Adherent Days (51d) 135/83 mmHg	No BP Log 0 days
---	---	----------------------------

Adherence Heatmap & Timeline (All medications)

■ Taken ■ Missing / Late / Variance ■ Non-Compliant/Red Flag ■ No Data

Legend: Green = Taken (100%), Yellow = Late (>2hrs) or Missed Dose, Red = Non-Adherent (>50% Missed) or Red Flag, Gray = No Data

Longitudinal Data Table (All medications)

Date	Medication	BP Med?	Sched	Actual	Var	Status	Reasons/Tags
2025-11-29	Amlodipine 5.0 mg	Y	-	-	0m	SKIPPED	Note: (Dosage: 5mg) [Imported/CSV]

Healthcare Provider Interpretation Guide

Therapeutic Adherence

Reflects doses taken vs. expected doses, providing a measure of compliance while the patient was actively engaged with the tool.

Dosing Variance & Pharmacokinetics

Yellow-highlighted cells (Variance > 120 mins) may impact steady-state plasma concentrations for medications with narrow therapeutic windows.

Reporting Integrity Gap

Gray-hatched calendar days indicate a lack of data entry; discuss with the patient to determine if these represent medication omission or a lapse in logging.

Symptom-Dose Correlation

Cross-reference context tags with actual time to identify potential temporal correlations between dosing and side effect onset.

NOTICE: This report is a patient-generated health record (PGHD) intended to support clinical decision-making. SteadyStat does not provide medical advice and this report is not a replacement for professional clinical judgment.

SteadyStat is a self-reporting tool intended for informational purposes only. This service is provided on an "as is" and "as available" basis. All data is stored locally on your device; SteadyStat does not collect, store, or share your personal health information, or transmit user data via the cloud.

Data visualizations are based on American Heart Association (AHA) guidelines, but we do not warrant or guarantee that these represent the most current or updated medical standards. While we strive for precision, SteadyStat does not guarantee that calculations, data visualizations, or content are free from errors, omissions, or inaccuracies. Use of this tool and reliance on any information provided is solely at your own risk.

These visualizations are not a substitute for professional medical diagnosis or treatment. SteadyStat does not provide medical advice.

Appendix A - Calculation Methodology and Reproducibility Specification

This appendix defines the deterministic calculation rules used to generate all metrics, tables, and summaries in the SteadyStat Report. Its purpose is to ensure that all reported outputs can be independently recomputed from raw blood pressure logs, medication schedules, and medication logs, without reference to application source code. Unless otherwise stated, all definitions in this appendix apply uniformly across the report, including UI-rendered views and exported PDF outputs.

A.1 Time Standardization and Calendar Interpretation

All events (blood pressure readings, medication logs, scheduled doses) are interpreted in the user's device local time at the moment the event was recorded.

If an event timestamp is stored in Coordinated Universal Time (UTC), it is converted to the device local time zone prior to:

- assignment to a calendar day,
- assignment to a daypart window, and
- calculation of time elapsed since medication dosing.

Calendar days are evaluated from 00:00 to 23:59 local time.

A.2 Blood Pressure Reading Inclusion Rules

Unless explicitly stated otherwise, all metrics use blood pressure readings that:

- fall within the report date range (inclusive), and
- contain both systolic and diastolic values.

Heart rate values are included only in metrics that explicitly reference heart rate.

If multiple blood pressure readings occur on the same calendar day, all readings are included, unless a metric specifies aggregation at the day level.

A.3 Daypart Classification

Morning	05:00 <= t < 09:00
Daytime	09:00 <= t < 18:00
Evening	18:00 <= t < 22:00
Night	22:00 <= t < 05:00 (next calendar day)

Timestamps exactly at a window start time are included in that window.

Timestamps exactly at a window end time are included in the subsequent window.

A.4 Medication Schedule Model

In the SteadyStat data model, each monitored medication defines zero or more expected dose times per day.

Definitions:

- Expected Dose: A specific instance of a required medication intake (medication x expected dose time x calendar day).
- Medication Active Interval: Defined by the start date (inclusive) and end date (exclusive).
- Scheduled-Treatment Day: Any calendar day containing >=1 expected dose for any monitored medication.

A.5 Medication Exclusions

To avoid false negatives, confirmed PRN medications, paused medications, and medications with zero scheduled dose times are excluded from adherence and coverage calculations.

A.6 Dose Log Classification

Logs are classified based on the user's manual entry status:

- Taken (on time)

- Taken (late)
- Skipped
- Missing log (inferred from absence of log for an expected dose)

Scoring

- Taken (on time) and Taken (late) count as taken.
- Skipped and Missing log count as not taken.

Timing Windows

- On-time window: ± 0 minutes around scheduled time. (0 is fixed and consistent across the report.)
- Same-day window: 00:00-23:59 local time.

A.7 Day-Level Adherence Classification

For each day in the range, the system assigns one status:

- Adherent Day
- Non-adherent Day
- No-data Day

Definitions:

- Adherent Day: All expected doses on that day are classified as Taken (on time or late).
- Non-adherent Day: At least one expected dose is classified as Skipped or Missing log.
- Non-adherent Day (with BP): A Non-adherent Day on which at least one blood pressure reading exists.
- No-data Day: A Scheduled-Treatment Day with: (a) no dose logs, and (b) no blood pressure readings.

A.8 Therapeutic Adherence Percentage

Therapeutic Adherence = $(\text{Total taken expected doses} / \text{Total expected doses}) \times 100$

Result is rounded to one decimal place for display.

A.9 Reporting Integrity Percentage

Reporting Integrity = $(\text{Scheduled-treatment days with } \geq 1 \text{ BP or dose log} / \text{Total scheduled-treatment days}) \times 100$

Result is rounded to one decimal place for display.

A.10 Treatment-Day Blood Pressure Coverage

Treatment-Day Blood Pressure Coverage (TDBC) evaluates the presence of blood pressure readings on Scheduled-Treatment Days.

- Denominator: Number of Scheduled-Treatment Days.
- Numerator: Number of those days with ≥ 1 blood pressure reading.

$\text{TDBC}\% = (\text{Numerator} / \text{Denominator}) \times 100$

Rounded to the nearest whole percent.

A.11 Confidence Classification

Confidence labels are derived from both data volume and coverage.

Dataset-Level Confidence

High	≥ 14 Scheduled-Treatment Days and $\text{TDBC} \geq 80\%$
Moderate	≥ 7 Scheduled-Treatment Days and $\text{TDBC} \geq 50\%$
Limited	Otherwise

Peak/Trough Confidence (per medication)

High	$n \geq 10$
Moderate	$5 \leq n < 10$
Limited	$n < 5$

A.12 Adherence Alerts and Symptom Flag Events

Adherence Alerts

An adherence alert is recorded when either condition occurs:

1. Two or more consecutive Non-adherent Days, or
2. Therapeutic adherence within any rolling 7-day window falls below 80%.

An adherence alert represents a distinct episode of clinically meaningful non-adherence. Consecutive or overlapping alert conditions are grouped into a single alert interval and counted once.

The report displays the total count of alert episodes within the report range.

Symptom Flag Events

A symptom flag event is recorded when a medication log includes any of the following context tags: Nausea, Dizzy, Sleepy, Pain, Brain Fog.

A.13 Peak and Trough Analysis

Reference Dose Time Selection

For each blood pressure reading and each medication, the reference dose time is determined as:

1. no reference time (reading excluded for that medication).

For peak/trough eligibility, a taken dose log up to 24 hours prior to the reading timestamp may be used as the reference dose time, including if it occurs before the report start date; otherwise the reading is excluded unless the expected-dose fallback applies.

If the current day is Non-adherent for that medication, the reading is excluded unless a valid Taken dose log exists.

Eligibility Windows

- Peak-eligible: $2.0 \leq \text{hours since last dose} < 6.0$
- Trough-eligible: $20.0 \leq \text{hours since last dose} \leq 24.0$

Aggregation

- Peak and trough systolic and diastolic means are computed as arithmetic means of eligible readings.
- Values are rounded for display only.
- Difference = (trough mean - peak mean).

A.14 Statistical Conventions

- Mean: arithmetic mean.
- Standard Deviation: sample standard deviation (divide by $N - 1$).
- Coefficient of Variation (CV): $CV = (SD / \text{Mean}) \times 100$

All statistics are computed at full precision and rounded only at final display.

A.15 Blood Pressure Category Assignment

Categories are assigned using AHA/ACC thresholds. If systolic and diastolic values fall into different categories, the higher severity category is assigned.

Percentages are rounded to one decimal place.

A.16 Canonical Calculation Policy

This appendix is the authoritative source for all calculations. UI and PDF outputs must conform to these definitions.

In the event of discrepancy, the methodology defined here is the authoritative source, and the implementation must be corrected.
